

**ATTACHMENT 3**  
**SECURITY PROCEDURES**

## **A. PROCEDURES TO PREVENT HAZARDS**

### **A.1 Security Procedures and Equipment (UAC R315-8-2.5)**

The general security provisions at TEAD include: (1) a barrier around the entire TEAD facility; (2) 24 hour, 7-day-per-week surveillance by roving patrols; (3) warning signs posted along perimeter fences to discourage unknowing or unauthorized entry; (4) internal barriers around specific facilities; (5) controlled entry to HWMUs through locked gates; (6) personnel access to the storage units, the incinerator, the Decineration™ test area, and the OB/OD unit controlled by the Demil Team, the Environmental Office and the Security Office, (7) two-way radio communications between security personnel, selected employees, and a central communications center; and (8) telephone communications available at selected facilities.

In addition to the above, security provisions for the OB/OD Area include:

- Entry to the area limited by posted road barricade/gate;
- Access limited to personnel involved in ongoing operations; and
- Restricted air space above TEAD OB/OD Area during daylight hours extends from ground surface to 3,048 m (10,000 ft) MSL.

#### **A.1.a Barriers and Means to Control Entry (UAC R315-8-2.5(b)(2)(i-ii))**

The entire TEAD facility is enclosed by a fence. Clear zones are maintained on either side of the perimeter fence, where possible. Clear zones are for the purpose of extending the line of sight distances for the patrolling security guards. Security personnel control gates in the perimeter fence. The main gate is open during normal duty hours Monday through Thursday and on an as-needed basis Friday through Sunday. All other gates are opened on an as-needed basis, and under security personnel supervision.

Conditions of entry signs are erected at the main gate outlining the responsibilities, limitations, and liabilities assumed by personnel entering TEAD. "No Trespassing" signs are posted every 500 feet along the perimeter fence.

In addition to perimeter fence and gates, entry to the three container storage igloos, the service magazines, the Decineration™ test area, and the deactivation furnace is controlled by internal barriers. The TEAD Storage Yard (Bldg 528) is enclosed with a 6-foot-high chain-link fence. A single access gate to Bldg 528 is locked unless needed. TEAD Environmental Office personnel control gate access. Entry to the OB/OD Unit is limited by posted road barricade/gate, and access is limited to personnel involved in ongoing operations.

#### **A.1.b 24-Hour Surveillance System (UAC R315-8-2.5(b)(1))**

Periodic surveillance of facilities at TEAD, including the HWMUs, is accomplished by roving security patrols. The security checks are as follows: HWMUs, Buildings 528, A101, C815, C816, 1368, 1205 and 1370 will be checked once per shift during non-duty hours. The security

checks include perimeter barriers, gates, locks, and building exteriors.

Adequate personnel are provided to man all access gates and to provide roving patrols of the administration and ammunition areas. Each roving patrol is motorized and radio equipped, and is assigned to a specific patrol area during its watch. Typical duties required by patrol members include:

- \* Checking for possible intrusion or security violations.
- \* Checking the security of locks to bunkers and buildings within the perimeter of the patrol area.
- \* Checking the physical integrity of perimeter barriers.
- \* Challenging all persons entering or exiting the patrol area who act suspicious, do not have a proper badge or who may require questioning.

#### A.1.c Warning Signs (UAC R315-8-2.5(c))

Signs stating "U.S. Government Property -- No Trespassing" are posted along the perimeter fences at 500-foot intervals. These signs are approximately 18" by 24" and are easily visible at a distance of 25 feet. Large signs describing the "Conditions of Entry" are posted at each gate to TEAD. These signs are approximately 4' by 6' in size and warn of the possible consequences of detected unauthorized entry.

Rectangular signs with either "Danger Unauthorized Persons Keep Out" or "Caution -- Hazardous Waste Area --Unauthorized Persons Keep Out" are posted at each of the HWMUs so that they can be seen from at least 25 feet from any approach to the unit. No other language edition is necessary since English is the area's predominant language.

The entrance to the TEAD OB/OD Unit is clearly marked with signs informing personnel that detonation and/or burning activities may be occurring. During the times that the OB/OD Unit is active, Ammunition Operations personnel control access to the area. As stated earlier, all signs are in English; all persons working within the TEAD perimeter are required to be literate in English, which is the predominant language of the surrounding area. Authorized visitors who might not be literate in English, such as members of international inspection teams, would be escorted by base personnel at all times.

#### A.2 Inspection Schedule (UAC R315-8-2.6(a)-(d))

##### A.2.a General Inspection Requirements

TEAD conducts regular and frequent inspections of the facilities and equipment used to treat, store, handle, or otherwise manage hazardous waste. These include checks for the mechanical condition of the equipment, equipment malfunction, operator errors, structural deterioration, loss or theft of items, equipment supplies and discharges that could adversely affect the environment.

Remedial actions found necessary by inspections are always completed on a time schedule that ensures that any deterioration or malfunction discovered does not lead to an environmental or human health hazard. Where a hazard is imminent or has already occurred, remedial action is taken immediately.
